

This PDF shows the most recent results for the DEiT base distilled solution model. The results seen in the output PDF file show a previous, less accurate run of the model. While working on the CS GPU server, this model (on this PDF) was deleted before having a chance to save the results in the notebook. Luckily, the results for the best run were added to the presentation before being completely lost. This is the result.

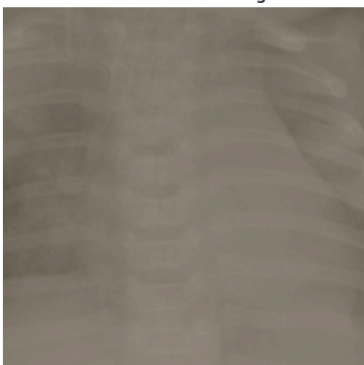

Accuracy of the network on the val images: 87 %
